It's four in the afternoon and you finally get your hands on the documents for **the** shipment. It's got a commercial invoice the size of a small novel; page after page of information that needs processing and collating. And you have to get the goods cleared today because your biggest customer has to have it delivered tomorrow morning.

You have to go through the invoice line by line, pencilling in commodity codes and all sorts of other stuff. Then you have to go through it again and again, adding up the values and quantities for each commodity code to sort it into a hand written list of items for the customs declaration.

in itself is substantial) but all the other stuff around it that keeps adding up. One shipment can eat up hours of your valuable time just handling the data that goes with it. And that often overlooked hidden cost can all too easily mean the difference between profit and loss.

And once you've done all that you've got to decipher your hand written list and key it all into your declaration software without making any mistakes. Talk about pressure!

To add insult to injury your customer also wants lots of information back once the goods have cleared. A report going into minute detail about how much duty he paid on the widgets on line 225. And he wants that for every shipment he imports. So it's not just about the time it takes to clear the goods (although that

The irony is that all of the invoice data you need is actually available from your customer in electronically but you haven't been able to do anything meaningful with it. But now the game has changed!

The worksheet functionality in **Sequoia** uploads commercial invoice data from any readable source automatically. All you have to do then is fill in any missing information and press a button. We'll even sort the data into the right number of declaration items and complete these for you. No re-keying. No mistakes.

And when your customer needs the report, that's just the click of a button away too. A comprehensive spreadsheet that ties the data from the worksheet together with detailed information about the customs declarations that consumed it, including the all-important amount of duty and VAT paid on every single widget.
